

## Myriad At A Glance

### Our Unique Philosophy & Approach

## The Four Pillars of Client Success

A consultancy and integrator for secure infrastructure solutions, Myriad leverages deep industry experience and a security-first approach. Myriad helps clients define, design, implement & manage a complete technology vision with emphasis on the four pillars of Security, SDN, Cloud, and Mobility:

### Security:

Myriad helps clients build a sophisticated, layered security posture that touches every piece of technology infrastructure and every business process to avoid potentially crippling losses of time, money, and data.

### SDN:

Myriad partners with clients to build out strategies to leverage network automation, orchestration, disaggregation, and virtualization across data center, campus, and branch networks.

### Cloud:

Myriad believes that workload placement should be based on organizational requirements and not infrastructure limitations.

### Mobility:

Myriad understands that BYOD and remote access are the new norm; the now permeable network edge must be approached with mobility & security in mind first.

## Our Approach

### Consulting & Design

Myriad approaches IT infrastructure holistically, ensuring security, automation, analytics, and scalability are top of mind from the beginning of the design process.

### Hardware & Software

Partnering with top manufacturers, Myriad takes an unbiased but opinionated approach to identifying the ideal hardware and software solutions—and validating their interoperability—required to achieve our clients' objectives.

### XaaS (IaaS, PaaS, SaaS)

By investing in understanding our clients' business-specific needs, Myriad helps choose the platforms, services and solutions that will increase operational efficiency and lower TCO.

### Connectivity & Colocation

Myriad's access to 100+ connectivity providers (everything from Cable to MPLS and SD-WAN) and 1,500+ datacenters around the globe ensures quick identification of the right solutions for our clients' budget.

### Implementation & Integration

Myriad's project management office leverages PMI best practices to ensure delivery of objectives on time and on budget.

### Management & Measurement

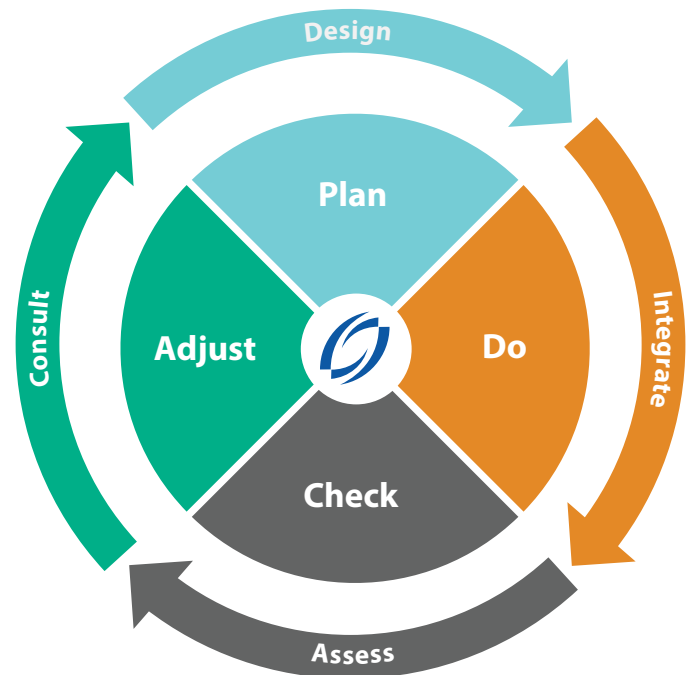

After evaluating needs and establishing metrics in the planning stage of every project, Myriad employs a variety of tools to measure solution efficacy and the overall impact of our work on our clients' objectives.

## Your Partnership with Myriad

Myriad's partnership with your organization starts with an in-depth consultation and results in a complete, ready-to-go solution that's set up, installed, and implemented on-time and within your budget. But it doesn't stop there—after the solution is in place, Myriad's team is accountable to metrics that measure return on investment.

### Why Myriad?

- Myriad's processes are fine-tuned based on rigorous internal and external feedback loops.
- With over 100 advanced certifications in house, Myriad's engineering team excels at delivering customized, thoughtfully crafted and vetted solutions that meet our clients' business, financial and timing standards.
- Myriad's partnerships with over 200 technology manufacturers ensure our clients' infrastructure is built with the most appropriate hardware and software to fit their business's needs at the best price.
- We have won 13 CRN awards over five consecutive years, including "Solution Provider 500," "Fast Growth 150," and "Tech Elite 250," which led us to be given the prestigious "Triple Crown."
- Our team speaks 5 languages (English, Spanish, Mandarin, Cantonese, and Hebrew)!
